

Model Name

1 PP

As the Modeler

I should supplement a Model Name when creating a new model.

M

User should be able to input numbers, instead of parameters.

- When a user writes a number in the formula field, it should be interpreted as a number and not a parameter.

- Record: Number entered on left of the eq. and "add" button is clicked.

Re-run experiments

2 PP

Experimentally to re-run experiments after closing the result table/graph

Edit an existing formula.

M

Just a edit button to change or formula or delete it.

Todo OK Button

Check if parameter and state values are named numbers

M

or ~~then~~ should get an error if incorrect values are given.

also: experiments

Scroll line in Table and Graph

Use a scroll line and scroll it in the table and graph

Display progressbar while running simulation

M

Experimenters: should be able to see progress of the simulation, ~~and~~ including percentage and ETA.

→ Expanding table

Make standard functions work (sinus)

M

the standard functions should be implemented and the states should respond.
